

ANDRÉ IBARRA PÉREZ

FRONTEND & MOBILE DEVELOPER

+5 years of experience as a Software Developer. Proven background in Frontend, Backend and Mobile development using widely adopted frameworks and tools. Experienced in coordinating complex projects, collaborating across multidisciplinary and international teams. Skilled in problem-solving, delivering scalable and innovative solutions, and optimizing user experience.

PROFESSIONAL EXPERIENCE

Mobile & Frontend Developer at EPAM/NEORIS - [miOXXO](#) (OXXO)

Jul 2022 - Present [Retail, product delivery and digital services, B2C] - (Native Android - Kotlin, Firebase)

RESPONSIBILITIES

- Lead an Android team, coordinating tasks, code reviews, and project goals.
- Develop and maintain key mobile app features such as store delivery, service payments, billing, promotions, coupons, and URL redirection, ensuring proper integration with external libraries and Google services (Maps, Firebase, Crashlytics, Amplitude, Leanplum).
- Manage the complete deployment cycle on Google Play Console, including updates to libraries and operating systems.
- Resolve errors examining Crashlytics issues, by analyzing obfuscated code, reviewing failing devices, and locating critical issues, improving overall app stability and quality.

KEY ACCOMPLISHMENTS

- Implemented event tracking and user behavior analysis, enhancing product personalization and user experience through interaction-based recommendations, increasing in-app purchase frequency.
- Developed and launched a service payment feature from scratch, supporting full and partial payments, significantly increasing app downloads and usage.
- Built and integrated a WebView to include Javascript mini-games in the app, boosting user engagement, interaction with activities, and in-app purchases.
- Optimized the deployment process to Google Play by implementing App Bundle, significantly reducing new releases times.

Full Stack Developer at [Duop](#) - [Interactive Training Center](#)

Jan 2025 - Aug 2025 [Scholar ERP, LMS] - (Angular, Laravel, MySQL)

RESPONSIBILITIES

- Design and implement MySQL databases and develop APIs with Laravel, applying best practices for endpoints, file exportation and cron jobs.
- Develop Angular-based web platforms for administrators (user and groups management, payments, billing) and end-users (students, class access and online payments).
- Integrate core functionalities such as multimedia upload/download, automated email sending and generate PDF/Excel reporting.

KEY ACCOMPLISHMENTS

- Developed and implemented an ERP and LMS system that optimized student management and enabled secure and efficient online payments.
- Automated administrative processes using Laravel commands and Hostinger cron jobs (user disabling, reminders, email notifications), reducing manual tasks and saving operational time.

- Built an invoicing system integrated with "facturoporti.com.mx" APIs, improving administrative processes and reducing invoice issuance time by over 50%.

Full Stack Developer at [Duop](#) - INPRF

Sep 2024 - Jan 2025 [Patient Management System (PMS)] - (Angular, Laravel, MySQL)

RESPONSIBILITIES

- Design and implement MySQL database for user management, test catalog tables, sections, questions, evaluation criteria, and custom scoring rules.
- Develop a Laravel (PHP) API for patients, appointments, tests, and results management, as well as PDF report generation.
- Built Angular web platforms for administrators (psychiatrists) and patients, including appointment management, test assignment and completion, progress tracking, activity logs and access control.

KEY ACCOMPLISHMENTS

- Achieved a reduction in test grading time from approximately one week to immediate results, eliminating human manual errors and increasing psychiatrists' efficiency.
- Accomplished the digitalization of the evaluation process, enabling patients to complete tests online with an intuitive and accessible system.
- Centralized management of patients, appointments, and results into a single platform, improving organization, control and access to clinical patient data.

RPA Developer Freelance - Process automation system

Jul 2024 - Sep 2024 [Robotic Process Automation (RPA)] - (Python)

RESPONSIBILITIES

- Develop a python desktop application to automate appointment registration and management processes, integrating Selenium and WebDriverManager designed for controller simulation of interactions.
- Implement API consumption, web scraping and optimized user flows to ensure efficient and reliable data retrieval.

KEY ACCOMPLISHMENTS

- Achieved a significant reduction appointment registration time by automating repetitive processes, increasing efficiency and accuracy.
- Implemented an optimized flow that simplified the end-user experience, reducing errors and improving usability.

Web Developer Freelance - Rotary Club Mante

Oct 2023 - Nov 2023 [SPA, Landing Page] - (Angular, HTML, CSS, Typescript)

RESPONSIBILITIES

- Develop a Single Page Application using Angular to promote Rotary Club Mante, showcasing its causes, projects and activities, with a contact form for potential collaborators.

KEY ACCOMPLISHMENTS

- Increased visibility of the club and its projects, attracted new collaborators and sponsors and promoted international exchange programs.

Full Stack Developer Freelance - CBA

Mar 2023 - Aug 2023 [ERP] - (Ionic/Angular, Supabase, Vercel)

RESPONSIBILITIES

- Develop a web application using Ionic/Angular, accessible from any device, to manage event halls with login, date and time control, payments, resources and search by name.
- Implement functionalities such as event editing and overlap prevention across three available halls, ensuring organized and efficient scheduling.

KEY ACCOMPLISHMENTS

- Optimized multiple event management without requiring native technologies, meeting the client's budget constraints.
- Solved event overlap issues, improved a visualization of payments, resources and facilitated staff coordination without daily communication.

Mobile Developer at EPAM/NEORIS - Metals Recycling App ([Bluescope](#))

Jun 2022 - Jul 2022 [App] - (Native Android - Java)

RESPONSIBILITIES

- Restructure app architecture, modify modules, consume endpoints and develop new features such as QR code scanning, furthermore, fixing bugs.

KEY ACCOMPLISHMENTS

- Collaborated directly with an U.S. client to improve the mobile application and deliver an updated high quality product.

Mobile Developer at EPAM/NEORIS - [Wibe App](#) (BBVA)

Mar 2022 - Jun 2022 [Insurances, Insurtech, App] - (Native Android - Kotlin)

RESPONSIBILITIES

- Develop an auto and motorcycle insurance app, including quote generation, policy viewing and integration of Google Services and Firebase for maps and geolocation.
- Analyze app security and stability, fixing production bugs.

KEY ACCOMPLISHMENTS

- Planned and managed migration of the app to Huawei Harmony OS using the HMS Toolkit plugin and adapted dependencies from Google Services.
- Ensured continued usage for Huawei device users, contributing 30% to user retention.

Full Stack Developer at EPAM/NEORIS - [Comenzando Juntos](#) (FEMSA)

Jan 2022 - Mar 2022 [Web Application, LMS] - (AngularJS, .NET Core, SQL Server, Azure)

RESPONSIBILITIES

- Maintain and update the web app, performing small feature changes and ensuring correct operation.
- Manage and optimize .NET APIs and Azure Webjobs, including database optimizations (tables, foreign keys, columns, records, stored procedures) in SQL Server.

KEY ACCOMPLISHMENTS

- Optimized the database to improve web app speed and enhance user satisfaction.
- Improved API efficiency by resolving queue and blocking issues in Azure Webjobs, increasing app performance by over 50%.

Mobile Developer at EPAM/NEORIS - [CEMEX Go - Driver](#) (CEMEX)

May 2021 - Jan 2022 [Logistics, Transportation, Delivery Management] - **(Native Android - Java - Kotlin, SQLite)**

RESPONSIBILITIES

- Develop new features using Google geofences, automated events upon crossing them, and built ticket filling forms, in addition to API consumption.
- Managed local SQLite database to store pending data for offline mode, ensuring proper synchronization once connectivity is restored.

KEY ACCOMPLISHMENTS

- Ensured correct data transmission by using local storage and background processes verifying connectivity and consuming APIs, saving users 30% of time.

Mobile Developer at EPAM/NEORIS - (ARCA CONTINENTAL)

Feb 2021 - May 2021 [Distribution, Logistics, Sales Management, Mobile App] - **(Android Nativo - Java, SQLite)**

RESPONSIBILITIES

- Develop a new application consolidating three existing instances, update libraries, adjust architecture, use Dagger for dependency injection and manage the local database.

KEY ACCOMPLISHMENTS

- Accomplished the unification of three instances of the same application with different databases, improved operational processes and reduced operation and administration time.

Full Stack Developer Freelance - (Gruas Marroquín)

Aug 2020 - Oct 2021 [ERP, Logistics, Mobile App] - **(Angular, Ionic, MySQL, Node.js, Express, Socket.io)**

RESPONSIBILITIES

- Design and normalize the database from scratch, develop a Node.js API using Express, and create endpoints.
- Develop an Angular Web App for services management (accidents, special services) with user login/registration, dynamic forms, socket usage and real time service status visualization.
- Develop a mobile app in Ionic for tow truck drivers with a login, service reception, form completion, background event sending and synchronization with administrators.

KEY ACCOMPLISHMENTS

- Implemented Socket.io to send real-time information without screen refresh, contributing to the customer satisfaction.
- Optimized business processes by 40% through service digitalization with the mobile app used by drivers and administrators.
- Increased business visibility and control for the client, ensuring full satisfaction and stronger operational decision-making.

Frontend Developer at Zangup - [Squirk \(Squirk\)](#)

Aug 2020 - Jan 2021 [Mobile applications, Landing pages] - (**Angular, Ionic, Firebase**)

RESPONSIBILITIES

- Develop a landing web page to showcase a product named Squirk Lubricant.
- Implement Firebase functionalities to manage and display review forms.
- Build multiple cross-platform mobile apps from scratch using Ionic/Angular and Firebase as database.
- Layout landing pages with Angular, HTML, CSS and Typescript applying Bootstrap for responsive design.

KEY ACCOMPLISHMENTS

- Created a landing page that increased product visibility in the market.
- Developed mobile apps and landing pages that boosted company visibility and client satisfaction.
- Achieved customer satisfaction with delivered products, reinforcing trust and quality perception.

Frontend Developer at EXOS - E-Global (E-Global)

Aug 2020 - Feb 2021 [NMS, Banks, Transactions] - (**Vue, Quasar**)

RESPONSIBILITIES

- Update and maintain a web app for the hospitality industry, focused on WiFi network management and support.
- Implement new features in a banking sector system, including form development and design.
- Consume endpoints following Vuex patterns to ensure consistent data management.

KEY ACCOMPLISHMENTS

- Improved a hospitality industry web app by fixing coding and design errors.
- Optimized banking forms, increasing filling speed.

SKILLS

- | | | |
|-------------------|-------------------------|---------------------------|
| • Self-taught | • Persistence | • Android - Kotlin / Java |
| • Fast learner | • Team player | • Laravel - PHP |
| • Adaptability | • Initiative | • Ionic |
| • Leadership | • Proactive | • MySQL |
| • Problem-solving | • Angular - HTML / CSS | • Firebase |
| • Agile mindset | • Javascript/Typescript | • .NET |

EDUCATION

Summer Research Program - AMC - Internet of Things at Tecnológico de Monterrey

Jun 2020 - Aug 2020 [México]
